

PFAFF® *creative icon*™ 2 Jumpsuit: Tips and Hints

This jumpsuit is a bold statement that shows the precision and artful design that empowers every owner of a PFAFF® *creative icon*™ 2 sewing and embroidery machine. You can use a variety of features to help you create a similar masterpiece.

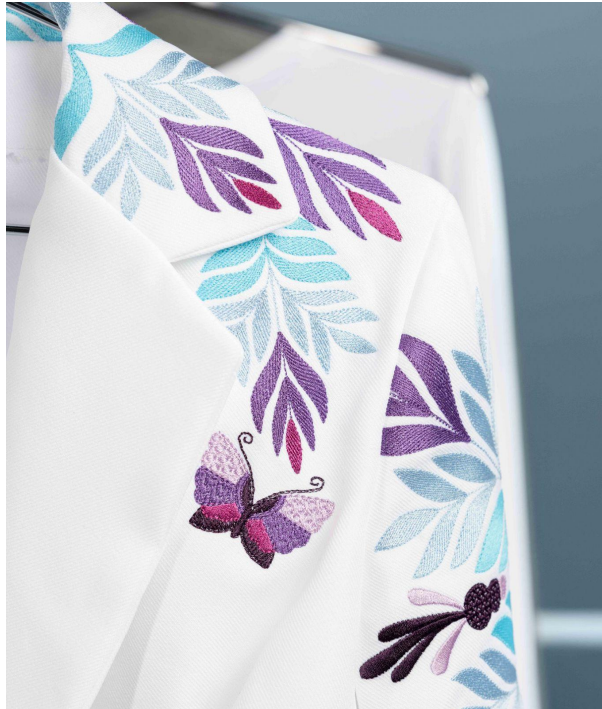

Large Designs

The PFAFF® *creative icon*™ 2 sewing and embroidery machine has the largest embroidery area on the market with the included *creative*™ Grand Dream Hoop (360x350). This built-in design is used at the top of one of the sleeves to beautifully fill the space.

Embroider Before Constructing

If you are making a garment from the beginning, embroider the fabric before constructing the garment. This will make the process of hooping your project much easier. Additionally, having parts of the embroidery tucked into seams gives the garment a different look and can help emphasize parts of the garment.

Projection, Hoop Scanning and Precise Positioning

There are a few tools on the PFAFF® *creative icon*™ 2 sewing and embroidery machine that can help you place designs. Use Projection or Hoop Scanning in Embroidery Edit mode to get a general feel for the placement of your design compared to your fabric. Then, in Embroidery Stitch-Out mode, you can use Precise Positioning to get stitch point accuracy. All of these are extremely helpful for multi-hoop embroidery and for embroidering odd shapes like collars or lapels.
